Interview Notes

The lecturer identified the following needs

1. **Consistent learning environments:** Students should use the same version of a learning tool so that differences between computers do not affect practical assessments.
2. **Easy tool access:** Students should access required tools through a browser without installing complicated software on their personal computers.
3. **Session availability information:** The system should check whether the college has available software license capacity before allowing a student to start a tool session.
4. **Reliable session tracking:** The system should record session requests and their statuses so that lecturers and authorized administrators can understand whether students obtained access to the required tools.
5. **Support for practical assessment:** The platform should help lecturers access consistent practical environments and obtain assessment-related information about students' work.
